0% detected as AI

The percentage indicates the combined amount of likely AI-generated text as well as likely AI-generated text that was also likely AI-paraphrased.

Caution: Review required.

It is essential to understand the limitations of AI detection before making decisions about a student's work. We encourage you to learn more about Turnitin's AI detection capabilities before using the tool.

0 AI-generated only 0%

Likely AI-generated text from a large-language model.

0 AI-generated text that was AI-paraphrased 0%

Likely AI-generated text that was likely revised using an AI-paraphrase tool or word spinner.

Disclaimer

Our AI writing assessment is designed to help educators identify text that might be prepared by a generative AI tool. Our AI writing assessment may not always be accurate (it may misidentify writing that is likely AI generated as AI generated and AI paraphrased or likely AI generated and AI paraphrased writing as only AI generated) so it should not be used as the sole basis for adverse actions against a student. It takes further scrutiny and human judgment in conjunction with an organization's application of its specific academic policies to determine whether any academic misconduct has occurred.

CHAPTER 6

CONCLUSION

6.1 Introduction

This marks the end of the report on the development of the Al-Muneer Online Portal project. The project went from the PSM1 stage to the PSM2 stage where a working online portal for Al-Muneer Hall was developed. The implementation of the system, together with the interfaces used and the tests carried out, were all described in Chapter 5. This chapter highlights the accomplishments of the project as well as possible future directions for improvement and maintenance.

6.2 Achievement of Project Objectives

The initial project goals have been achieved during the entire life cycle of the project. The process of requirements elicitation and analysis was done in the PSM1 stage through stakeholder interaction with Mr. Ahmed Almunajid, which resulted in the development of the Software Requirements Specification (SRS). The system architecture and design were described in the Software Design Description (SDD).

With the PSM2 stage, the objective for software development and implementation was achieved by developing the portal using Spring Boot, PostgreSQL, Thymeleaf, and JavaScript. All the main modules have been developed including browsing of visitor information, media gallery with label filter, availability calendar, dynamic pricing display, inquiry submission with 9 digit reference codes, uploading proof of payment, feedback submission, JWT protected authentication of administrators, content management, inquiries and payments management, WhatsApp notifications, calendar management, dashboard analytics, reports with charts and Gemini AI advisors.

Black box, white box, and user testing was conducted for the comprehensive test and validation of the system in accordance with Chapter 5 and Software Test Documentation (STD). It was concluded that the system works perfectly well and

meets all the requirements. Deployment to a Cloud VPS has been done and the portal can be accessed using any browser. Technical documentation has been provided to facilitate future maintenance.

6.3 Future Improvements

While the current design meets the desired scope, the following improvements may be considered for later developments:

- **Direct Online Payments:** Integrating a formal payment gateway would remove reliance on manual transfer screenshots and provide immediate booking confirmation.
- **WhatsApp Business API:** The use of WhatsApp Business API instead of client side deep links would provide more options for automated and two way messaging notifications.
- **Multi-Language Support:** Adding full Arabic and English localisation would improve accessibility for a broader audience.
- **Mobile Application:** A companion mobile app could offer push notifications and a native experience for frequent users.

This will be built on the already established strong base of the Al Muneer Online Portal.
