PSM 1 (SEC_3032)
PROJECT PROPOSAL & SUPERVISION CONSENT FORM

Session/Semester: 2425/2

Instruction: Please complete and submit to your program PSM1 committee member.

Student: Please complete student information in detail. The proposal must be reviewed by the supervisor before submission.

Supervisor: Please complete your consent, signature, stamp and date. Please review student's proposal before submission.

Note: Students are ONLY ALLOWED to do Research type projects if they have a CGPA of 3.3 and above.

SECTION A: STUDENT INFORMATION

Name:	Ahmed Hani Ahmed Ghaleb		
Year/Course:	2122/SECJH		
IC. No.:	202103M10402	Matrix No.:	A21EC9120
Email:	ahmedahmed@graduate.utm.my	Mobile No.:	01112344710
CGPA:	Date: 2.83	 Signature:	

SECTION B: SUPERVISOR CONSENT

Supervisor Name:	DR. MUHAMMAD LUQMAN BIN MOHD SHAFIE		
Email:	muhammadluqman.ms@utm.my	Mobile No.	+60 13-896 1412
Consent:	I AGREE to be an Undergraduate Supervisor for this student with the proposed title that I have reviewed.		
Signature & Official Stamp:	 DR MUHAMMAD LUQMAN BIN MOHD SHAFIE Senior Lecturer Software Engineering Department Faculty of Computing Universiti Teknologi Malaysia	Date:	22/4/2025

SECTION C: PROJECT DETAILS

Project Title:	Al-Muneer Online Portal
Proposal No.*	1
Project Idea:	☒ My own idea ☐ Proposed by the supervisor
Project Type:	☐ Research ☒ System Development

**(Please follow your preference. Proposal No. 1 – the highest priority, followed by Proposal No. 2 Each student may propose a maximum of 2 topics).*

Problem Background and Proposed Solution:

The owner of the Al-Muneer reservation hall recognizes the potential of a website not only as a modern marketing tool to impress customers but, more importantly, as a means to significantly reduce the amount of time spent addressing repetitive inquiries.

While the phone call process isn't inherently problematic, the constant influx of calls requesting the same basic information—availability, pricing details, contact information, and visual assets—is time-consuming. The goal is to create a visually appealing and comprehensive website that preemptively answers these common questions, freeing up the owner's time for more strategic tasks and enhancing the overall customer experience by providing instant access to essential information.

Objectives:

Phase 1: To elicit and analyze the requirements and needs of Al-Muneer Hall Owner and Potential Customers/Website Visitors stakeholders for the Al-Muneer Online Portal system, including requirements for basic reporting, notifications, feedback mechanisms, and a simple payment proof process.

Phase 2: To design the architectural models, user interface (including elements for payment proof upload and feedback submission), and database for the developed Al-Muneer Online Portal system based on the elicited requirements and design models.

Phase 3: To develop the Al-Muneer Online Portal system based on the designed models, including core features plus reporting, feedback management, simple payment proof upload functionality, and notification triggers (focusing on SMS/WhatsApp channels).

Phase 4: To evaluate and validate the developed Al-Muneer Online Portal system by applying Functional Testing (including unit, integration, and system tests), Usability Testing, Performance Testing, and basic Security Testing techniques.

Deliverables focus: Comprehensive Test Report, User Acceptance Testing (UAT) Results, Performance Metrics Report.

Scopes:

Platform: Web-based application (mobile-friendly view for Visitors). No native mobile app.

Users:

- Visitor (browse, view calendar/pricing/FAQ, submit booking inquiry, optionally upload payment proof (screenshot), submit feedback).
- Owner (manage calendar, pricing, FAQ, gallery via admin panel, view/generate basic reports, manage feedback, update payment status, configure/manage notifications).

• **Boundaries/Limitations:**

- Simple payment proof upload only (e.g., screenshot of local transfer receipt). No direct online payment processing or integration with banks/payment gateways.
- No integration with external calendars or booking systems.
- No integrated live chat feature as preferred by stakeholder. Standard contact information (Phone/WhatsApp) will be clearly displayed.
- No advanced event management or CRM features.
- Basic analytics only.
- Owner provides initial content (text, photos, videos).
- Website 10 thousand monthly visitors max.
- Basic reporting features for admin (e.g., inquiry logs, booking summaries, feedback overview).
- Notifications primarily via SMS/WhatsApp channels reflecting local preferences; email notifications minimal.
- Feedback submission feature for visitors and management interface for admin.

Project Requirements:

Software	App Framework: Spring Boot (Java) / MVC Database: MySQL / PostgreSQL
-----------------	---

	Frontend: HTML5, CSS3, JS (Responsive)
Hardware	Cloud VPS / PaaS / local VM.
Technology/ Technique/ Method/Algorithm	Spring Boot – Java – MVC / Waterfall
Network Elements	HTTPS Protocol
Security Elements	Auth - SSL/TLS / Hashed Passwords (Admin)
Project Area:	Web Development
