User Acceptance Test (UAT) Document

Project: Al-Muneer Online Portal

Version: 1.0

Appendix: APPENDIX E — UAT

Document Overview

This document records the user acceptance testing performed against the Al-Muneer Online Portal, following the test cases defined in the Software Test Documentation (STD), Version 1.4. For each test case, the actions performed, the expected results, the observed outcome, and supporting screenshots are recorded below.

Test date	29/06/2026 20:27 UTC
STD reference	Version 1.4

Performed by

1. **Visitor** — public pages (/ , /inquiry, /feedback, /payment/upload)
2. **Administrator** — admin dashboard (/admin/*)

Summary

Total test cases	38
Pass	38
Fail	0
Blocked	0

Screenshots are stored under *test-execution/uat-screenshots/* and are referenced as figures below each test case table. Figure labels follow the format “Figure <test case no.> (<letter>)”, for example Figure 2.2 (b) denotes the second screenshot captured for test case 2.2.

PART 1

VISITOR MODULE (PUBLIC WEBSITE)

Description:

This part covers visitor-facing functionality on the public website: venue information, media gallery, the availability calendar, the pricing panel, booking inquiries, payment proof upload, and feedback submission.

Performed by:

1. Visitor (public browser)

1.0 View Venue Information & FAQ

STD reference: TC_V_001

No	Action	Expected Result	Result	Comment
1.1	1. Open the home page (/). 2. Scroll to the Venue section, or click Venue in the navigation bar. 3. Scroll to the FAQ section, or click FAQ in the navigation bar. 4. Click a FAQ question. 5. Open <code>/faq</code> directly in the browser address bar.	1. The home page loads successfully. (Figure 1.1 (a)) 2. The venue description, capacity, contact details, location, services, an embedded map, and an “Open in Google Maps” link are displayed. (Figure 1.1 (b)) 3. The FAQ section is visible, showing a summary of each question. 4. The corresponding answer expands within the accordion; the first item may be expanded by default. (Figure 1.1 (c)) 5. The browser redirects to <code>/#faq</code>.	Pass	
1.2	1. Open the home page and scroll past the pricing section. 2. Navigate to <code>/#faq</code>.	1. No FAQ section is rendered. The FAQ navigation link may still be present, but the corresponding section is absent. The prerequisite step of clearing all FAQ entries in the admin panel is shown in the figure below. (Figure 1.2 (a))	Pass	

		2. No FAQ content is displayed, and the page does not produce an error.

2.0 View Media Gallery

STD reference: TC_V_002

No	Action	Expected Result	Result	Comment
2.1	1. Open the home page and scroll to the Gallery section. 2. Click a category filter button. 3. Click an image thumbnail. 4. Close the lightbox.	1. Thumbnails are displayed in a masonry layout. (Figure 2.1 (a)) 2. The grid filters to the matching category; the All option restores the full set. 3. A lightbox opens showing the full-size image. (Figure 2.1 (b)) 4. The view returns to the gallery grid.	Pass	

2.2	1. Open <code>/#gallery</code> with the <code>media_items</code> table empty.	1. A placeholder message (e.g. “Gallery coming soon”) is displayed, and no error occurs. (Figure 2.2 (a))	Pass	
-----	---	---	-------------	--

Test case 2.2

Screenshots

3.0 Check Availability Calendar

STD reference: TC_V_003

No	Action	Expected Result	Result	Comment
3.1	1. Open the Availability section (<code>/#availability</code>). 2. Observe dates that have been configured by the administrator. 3. Observe past dates on the calendar. 4. Observe a future date with no configured status.	1. An interactive calendar for the current month is displayed. 2. Dates marked Booked and Pending are visually distinct from Available dates. (Figure 3.1 (a)) 3. Past dates are dimmed and not selectable. (Figure 3.1 (b))	Pass	

		4. The date is treated as Available and remains clickable.		
3.2	1. Click Next month on the calendar. 2. Select an available future date, e.g. 2026-07-01. 3. Click Submit inquiry .	1. The calendar updates and the displayed statuses match the database for that month. (Figure 3.2 (a)) 2. The date is highlighted, and a Submit inquiry action becomes available. (Figure 3.2 (b)) 3. The browser navigates to <code>/inquiry?date=2026-07-01</code> with the event date pre-filled. (Figure 3.2 (c))	Pass

4.0 View Pricing Panel

STD reference: TC_V_004

No	Action	Expected Result	Result	Comment
4.1	1. Open the Pricing section (/#pricing). 2. Verify that an inactive tier is not shown. 3. Click Book [package name] on an active tier.	1. Active pricing tiers are displayed with their name, price, and description. (Figure 4.1 (a)) 2. The inactive tier does not appear on the public page; the admin panel confirms both the active and inactive tiers exist in the database. (Figure 4.1 (b)) 3. The browser navigates to /inquiry?pricingId={id} with the corresponding package pre-selected on the form. (Figure 4.1 (c))	Pass	
4.2	1. Open the home page with no active pricing tiers configured.	1. The pricing section is hidden from the public page. (Figure 4.2 (a))	Pass

5.0 Submit Booking Inquiry

STD reference: TC_V_005

No	Action	Expected Result	Result	Comment
5.1	1. Open the inquiry form (/inquiry). 2. Complete the required fields and submit the form. 3. Review the confirmation page. 4. Check the database for the submitted inquiry. 5. Revisit /inquiry.	1. The inquiry form is displayed. (Figure 5.1 (a)) 2. The browser is redirected to /inquiry/confirmation/{9-digit-code}, where the confirmation page displays a 9-digit reference code. (Figure 5.1 (b)) 3. The visitor name, event date, and a status of New are displayed alongside the reference code. 4. A corresponding booking_inquiries record exists with the matching data and reference code. 5. The existing inquiry is surfaced automatically via the stored cookie. (Figure 5.1 (c))	Pass	
5.2	1. Leave the Full Name field empty and submit the form. 2. Provide a name, leave the WhatsApp field empty, and submit the form.	1. Native browser (HTML5) validation prevents submission. (Figure 5.2 (a)) 2. Submission is blocked, and the required field is indicated.	Pass	
5.3	1. Enter a non-numeric WhatsApp number (e.g. abc) and submit the form.	1. Pattern validation blocks submission. (Figure 5.3 (a)) 2. Pattern validation blocks	Pass	

	2. Enter a WhatsApp number shorter than nine digits and submit the form.	submission.		
5.4	1. Submit an inquiry for a date already marked Booked , e.g. 2026-08-29.	1. An error message is displayed indicating the date is unavailable, and no new inquiry is created. (Figure 5.4 (a))	Pass

6.0 Submit Payment Proof

STD reference: TC_V_011

No	Action	Expected Result	Result	Comment
6.1	1. Open the payment upload page from the inquiry confirmation page. 2. Select a valid receipt image and submit it. 3. Check the admin payments list (/admin/payments).	1. The upload form displays a banner with the visitor name and event date. (Figure 6.1 (a)) 2. A success message is shown, and a <code>payment_proofs</code> record is created with status Pending verification. (Figure 6.1 (b)) 3. The new proof appears in the list as pending. (Figure 6.1 (c))	Pass	

Test case 6.1

Screenshots

7.0 Submit Feedback

STD reference: TC_V_012

No	Action	Expected Result	Result	Comment
7.1	1. Open the feedback form (/feedback). 2. Submit the form with a rating and message. 3. Submit the form anonymously, leaving the name and WhatsApp fields blank.	1. The form is displayed with an optional name and WhatsApp field, a required star rating, and a required message field. (Figure 7.1 (a)) 2. A thank-you message is displayed, and a record is created in the feedback table with <code>isReviewed = false</code>. (Figure 7.1 (b)) 3. The submission is accepted and stored with null contact fields.	Pass	
7.2	1. Leave the message field blank and submit the form.	1. An error message indicates that the message is required, and no database record is created. (Figure 7.2 (a))	Pass

PART 2

ADMINISTRATOR MODULE (ADMIN DASHBOARD)

Description:

This part covers administrator functionality within the admin dashboard: secure login, content management, calendar and inquiry handling, payment verification, traffic analytics, report generation, feedback review, and WhatsApp notification templates.

Performed by:

1. Administrator (admin)

1.0 Login

STD reference: TC_A_000

No	Action	Expected Result	Result	Comment
1.1	1. Navigate to /admin/login. 2. Enter the valid username and password, and submit the form. 3. Attempt to access /admin/inquiries.	1. The login form is displayed. (Figure 1.1 (a)) 2. The browser redirects to /admin/dashboard, and the dashboard loads. (Figure 1.1 (b)) 3. The inquiry management page loads directly, without being redirected to the login page. (Figure 1.1 (c))	Pass	

1.2	1. Navigate to <code>/admin/login</code>. 2. Enter the valid username with an incorrect password and submit the form. 3. Navigate directly to <code>/admin/dashboard</code> without logging in.	1. The login form is displayed. (Figure 1.2 (a)) 2. An error message is displayed, and the user remains on the login page. (Figure 1.2 (b)) 3. The browser redirects to <code>/admin/login</code>. (Figure 1.2 (c))	Pass

5.0 Manage Calendar & Inquiries

STD reference: TC_A_009

No	Action	Expected Result	Result	Comment
5.1	1. Open the admin calendar (/admin/calendar). 2. Select a date, e.g. 2026-09-18, set its status to Booked, and save. 3. Open the visitor-facing calendar (/#availability) for the same date. 4. Verify the calendar refresh behaviour after the update.	1. The calendar is displayed with the current slot statuses. 2. A success message is shown, and the availability_slots record is updated in the database. (Figure 5.1 (a)) 3. The date is shown as Booked. (Figure 5.1 (b)) 4. The grid remains on the selected month without a full-page reload or jump.	Pass	
5.2	1. Open /admin/inquiries and open an inquiry detail view. 2. Update the status to Contacted and save.	1. A status drop-down and notes field are displayed. (Figure 5.2 (a)) 2. The change is saved in the database, and the inquiry list reflects the new status. (Figure 5.2 (b))	Pass	

Test case 5.1

6.0 View Traffic Analytics

STD reference: TC_A_010

No	Action	Expected Result	Result	Comment
6.2	1. Open /admin/analytics. 2. Wait for the response from /admin/analytics/ai-insight. 3. Verify the page load sequence.	1. The dashboard renders immediately, and the AI panel shows a loading indicator. (Figure 6.2 (a)) 2. Bullet-point advice appears, or a graceful error message is shown if the API key is unavailable. (Figure 6.2 (b)) 3. The initial dashboard render is not blocked by the AI request.	Pass	

Test case 6.2

Screenshots

7.0 Manage Payment Status

STD reference: TC_A_013

No	Action	Expected Result	Result	Comment
7.1	1. Open a pending payment proof in /admin/payments/{id}. 2. Set the proof status to Verified and save.	1. The receipt image is visible. (Figure 7.1 (a)) 2. The proof status changes to Verified , the related inquiry status changes to Confirmed , and the slot status changes to Booked . (Figure 7.1 (b))	Pass	
7.2	1. Set the proof status to Rejected and save.	1. The proof status changes to Rejected ; the inquiry status is unaffected, and no slot is booked. (Figure 7.2 (a))	Pass	

Test case 7.1

Screenshots

Test case 7.2

8.0 View / Generate Reports

STD reference: TC_A_014

No	Action	Expected Result	Result	Comment
8.1	1. Open /admin/reports. 2. Apply a date-range filter. 3. Apply a date range with no matching records.	1. Summary counts and pie/bar charts (inquiry status, payment status, feedback ratings) are displayed. (Figure 8.1 (a)) 2. The figures and charts update to reflect the filtered period. (Figure 8.1 (b)) 3. A zero/empty state is shown without error. (Figure 8.1 (c))	Pass	
8.2	1. Open /admin/reports with a date range applied. 2. Wait for the response from /admin/reports/ai-insight.	1. The AI panel shows a loading indicator after the page loads. (Figure 8.2 (a)) 2. Three bullet points referencing the report figures are displayed (Figure 8.2 (b)), or a graceful error is shown if the API key is unavailable (Figure 8.2 (c)).	Pass
